WORK EXPERIENCE

Junior AI/ML Engineer Intern IMG Global Infotech

- Worked on AI-powered applications including chatbots and Retrieval-Augmented Generation (RAG) systems.
- Built conversational AI workflows using LangChain, LangGraph, FastAPI, Hugging Face, ChromaDB, and Redis.
- Implemented vector embeddings, semantic search, session management, and memory-based conversational systems.
- Collaborated on practical AI use cases involving NLP, Generative AI, and intelligent automation.
- Strengthened problem-solving and backend integration skills through real-world AI projects.

Business Development Executive (BDE) Intern Techbrosky | 6 Months

- Assisted in lead generation and client communication through digital outreach and follow-ups.
- Coordinated with prospective clients and supported business relationship management.
- Developed strong communication, teamwork, and stakeholder coordination skills in a professional environment.

EDUCATIONAL BACKGROUND

Bachelor of Computer Applications (Data Science)
JECRC University, Jaipur
Class XII – Kendriya Vidyalaya (2023)
Class X – Emmanuel Mission Secondary School (2021)

PROFESSIONAL SUMMARY

BCA (Data Science) student with hands-on experience in Python, Machine Learning, NLP, Generative AI, and Agentic AI systems. Experienced in building end-to-end AI applications including RAG-based chatbots, NLP models, and automation workflows using LangChain, LangGraph, FastAPI, ChromaDB, Redis, and Hugging Face. Strong foundation in AI model development, semantic search, vector databases, and conversational AI systems. Seeking opportunities as an AI/ML Engineer, Generative AI Intern, NLP Engineer, RAG Developer, or Associate AI Engineer, with a strong interest in building practical AI-driven solutions and intelligent systems.

TECHNICAL SKILLS

- Languages: Python (Intermediate), SQL, JavaScript, C++
- AI/ML: Machine Learning, NLP, Deep Learning, LSTM, TensorFlow, Keras
- Generative AI: LangChain, LangGraph, LangSmith, RAG, Prompt Engineering, Hugging Face
- Databases: MySQL, MongoDB, ChromaDB, Redis
- Frameworks & Tools: FastAPI, Streamlit, Git/GitHub, Power BI, Pandas, NumPy, Matplotlib, Figma
- Core Concepts: OOP, Data Analysis, API Integration, Semantic Search, Vector Embeddings

WORK EXPERIENCE

Toxicity Detection System (NLP | Deep Learning)

- Developed an advanced NLP-based toxicity detection system for multi-label text classification using LSTM, TensorFlow, and Keras, capable of identifying multiple categories of toxic content.
- Built a complete end-to-end machine learning pipeline, including text preprocessing, tokenization, vectorization, model training, evaluation, and threshold-based prediction optimization.
- Designed and deployed a Streamlit-based web application for real-time toxicity prediction, enabling users to test text inputs with live model inference.
- Improved understanding of deep learning architectures, NLP workflows, model optimization, and deployment practices.

RAG-Based Movie Chatbot (Generative AI)

- Built an intelligent AI-powered movie recommendation chatbot using LangChain, ChromaDB, Redis, and Llama 3.1 (Groq API) to deliver context-aware movie suggestions.
- Implemented semantic search functionality on IMDB datasets using Hugging Face sentence-transformers and vector embeddings, enabling highly relevant recommendation retrieval.
- Developed a multi-session conversational memory system with persistent Redis memory, allowing users to continue conversations seamlessly across sessions.
- Added mood-based filtering, genre preferences, and streaming-platform recommendations, enhancing personalization and user experience.
- Integrated conversation summarization memory to manage long-context interactions efficiently and avoid information loss.

E-Commerce Website (Frontend Development)

- Designed and developed a responsive electronics e-commerce website using HTML and CSS, focused on clean UI and intuitive navigation.
- Implemented mobile-responsive design principles to ensure smooth accessibility across desktop, tablet, and smartphone devices.
- Improved user experience (UI/UX) through structured layouts, product categorization, and visually organized interfaces.
- Strengthened frontend development fundamentals including responsive web design, user-centric interfaces, and layout optimization.

Multi-Document AI Assistant (RAG | Generative AI)

CERTIFICATIONS & ACHIEVEMENTS

- Frontend Developer Certification – Coding Blocks (Jul 2025)
- Special Mention for extraordinary participation in JECRC events
- Core Team Member, Aasahyein – Social initiative for blood and SDP donations

SOFT SKILLS

- Communication • Leadership • Team Collaboration • Problem-Solving • Analytical Thinking • Time Management • Adaptability • Stakeholder Coordination
